Turning systemic problems into **intelligent solutions.**

---

## BUSINESS SYSTEM DESIGN

Business System Design refers to the drafting, installation, configuration, and support of effective and integrated work processes and information systems. We take the best of your current systems, add in the required features and enhancements, introduce new processes where needed, and deploy a single integrated system which is closely aligned to your business objectives.

The specific services performed are dictated by the Systemiqs Implementation Plan™. This plan is delivered as part of a Systemiqs Strategic Interview™, where we've thoroughly analyzed the existing environment and identified exactly what enhancements need to be made.

### Systemiqs Business System Design Services can include:

- Research and Recommendations on Best of Breed Hardware and Software including but not limited to:
  - Web Applications
  - Database Design
  - Mobile Devices
  - Internet Services
  - Data Storage and Retrieval
  - Information and Data Organization
- Contacting Vendors, Developers, and Service Providers to Evaluate Products
- Determine Technical Specifications and Implementation Costs
- Preparation of RFPs and Project Objectives
- Project Management from Time of Procurement through Acceptance Testing
- Development and Creation of User Guides and Training Materials
- User Training
- Troubleshooting and Escalation of Questions to Vendors and Developers
- Database Schema Development
- Workflow and Information Processing Diagrams

A large orange circle graphic containing text.

When you engage any of our Implementation Services, you are assigned a Project Manager who serves as a single-point of contact throughout the project.

We also engage in productivity coaching to ensure you and your staff are comfortable with the changes and the new workflow.

---

Recommendations in the Systemiqs Implementation Plan™ determine the specific services necessary to increase productivity. License fees, Developer costs, and Hardware/Software purchases are additional. Package pricing is available when several projects are initiated and integrated together.

---

“We combine the latest technological advances with the latest research in human development to implement processes and systems that enable growth and facilitate intelligent decision-making.”

**WENDY RONITZ-BAKER** Chief Information Architect
