

CASE STUDY – TRACK INVENTORY MORE EFFICIENTLY OVER THE WEB

CLIENT

The Blue Man Group
www.blueman.com

PROBLEM

The Production Department needed a dynamic way to manage the trafficking of props, equipment, instruments, and costumes required to support a global theatre company.

SOLUTION

Wendy Ronitz-Baker custom-designed a web-based Production Inventory System that gave the company real-time data concerning inventory levels, valuation, and gear shipments. This system tracks all equipment and costumes in multiple warehouse locations and is accessible 24 x7 from anywhere in the world. It can scale for growth and has the capability of supporting both Domestic and International Productions. The system was also developed for future integration with Great Plains Accounting System.

SYSTEMIQS SERVICES ENGAGED

Systemiqs Implementation Services

- Research and Recommendations on Best of Breed Web Applications
 - Contacted Vendors, Developers, and Service Providers to Evaluate Products
 - Determined Technical Specifications and Implementation Costs
 - Prepared RFPs and Project Objectives
 - Project Management from Time of Procurement through Acceptance Testing
 - Development and Creation of User Guides and Training Materials
 - User Training
 - Troubleshooting and Escalation of Questions to Vendors and Developers
 - Workflow and Information Processing Diagrams
-
